

## What is Waste2Wear RA-3?

Recycling Assurance three step testing method (RA-3) is a patent-pending testing method developed by Waste2Wear and verified by the esteemed testing and consulting company WESSLING that can uniquely identify if products are made from recycled plastic bottles and to what percentage.

## What's in it for me?

- Ascertain if the RPET fabric you have bought from another supplier is really made out of plastic bottles and if so, what percentage.
- Verify to your customers the exact recycled content of our RPET fabrics.

## How does the RA-3 testing method work?

A product (piece of fabric, yarn, fiber or even hard plastic) allegedly made from recycled plastic bottles is submitted to the Waste2Wear Shanghai office along with a completed RA-3 Application Form with details of claimed content. WESSLING representatives supervise the chemical testing method to verify the process. Then a report is issued from both Waste2Wear and WESSLING stating the results. Only products that pass the test receive the highly coveted RA-3 certificate.

## What if I want to test a fabric but I am not a Waste2Wear customer?

The independently verified RA-3 testing service is available to any company around the globe that is interested in verifying that their fabrics are indeed made from recycled plastic bottles.

## How much does the RA-3 testing process cost?

Individual tests cost US\$ 495

Discounts for annual subscriptions:

- 10 samples US\$450/pc, total US\$4,250
- 25 samples: US\$ 425/pc, total US\$ 10,625

Further discounts available for larger number of tests
